

Installing LM Studio

NOTE: This document was created on July 13, 2026. Because companies always make updates to their websites' user interface, snapshots you see in this document might slightly differ from the current site interface. If it is the case, use the equivalent selections/buttons.

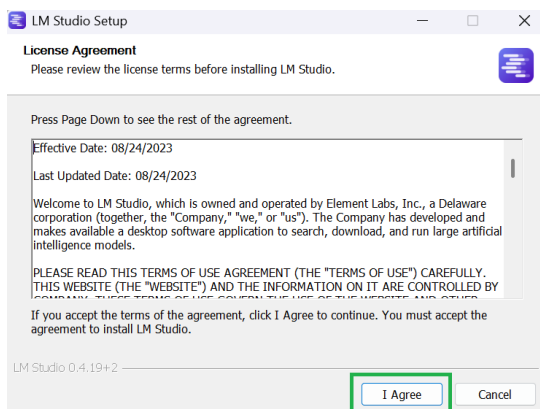

1. Open a browser (e.g., Chrome or Firefox) and navigate to <https://lmstudio.ai/>
2. Click the **Download** button in the upper right-hand corner of the page. This takes you to a page where it asks you to select your appropriate OS.
3. Choose your OS (in my case it is Windows) and take the default suggested version of LM Studio (in the example below it is 0.4.19 – However, if the page shows you a higher version, then choose that version). Then click the blue **Download for Windows** button.

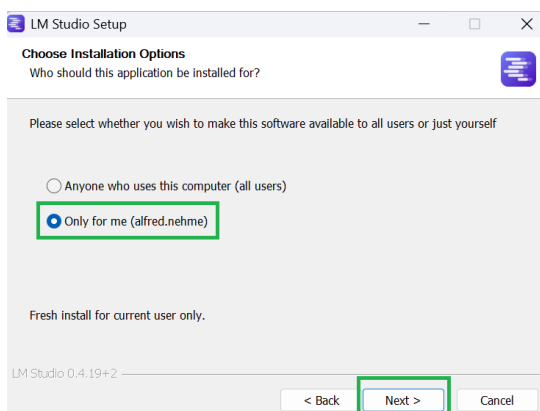

This downloads the installer file (e.g., *LM-Studio-0.4.19-2-x64.exe*) to your computer. By default, it is downloaded to the Downloads folder on your PC.

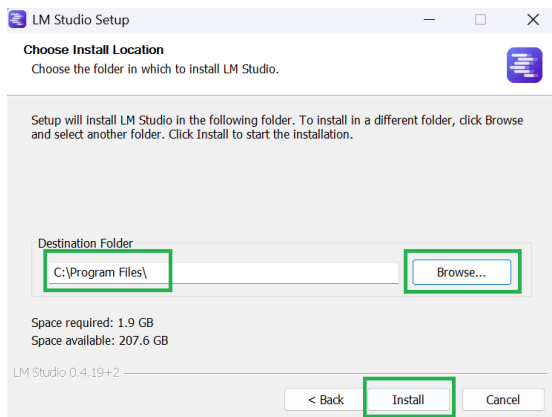

4. Go to the Downloads folder and double-click the *.exe file you just downloaded. This starts the LM Studio Setup installer. Click the **I Agree** button:

5. On the next screen, choose the **Only for me** option and click the **Next** button.

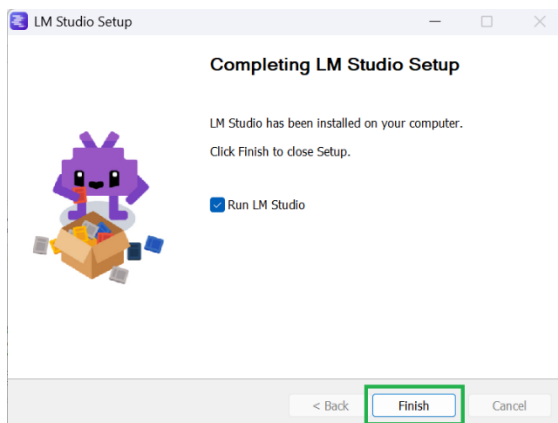

6. On the next screen (Choose Install Location), click the **Browse** button and choose folder **C:\Program Files**. Then click the **Install** button.

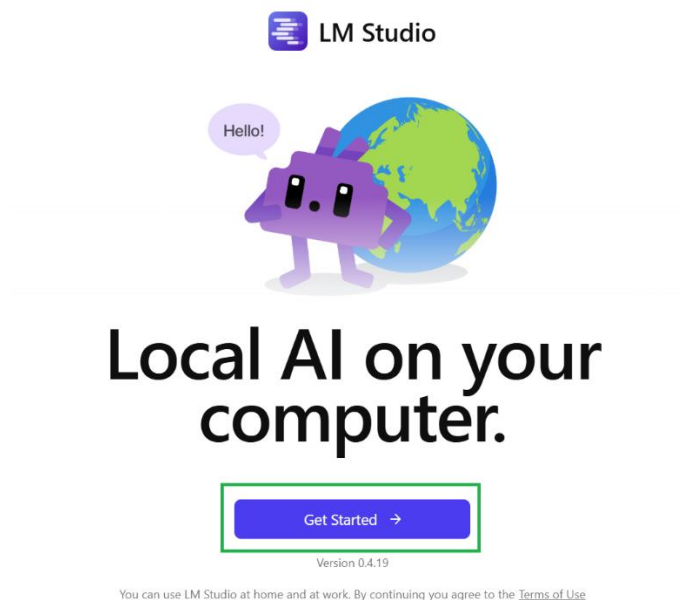

This starts the installation process. Please wait until installation finishes.

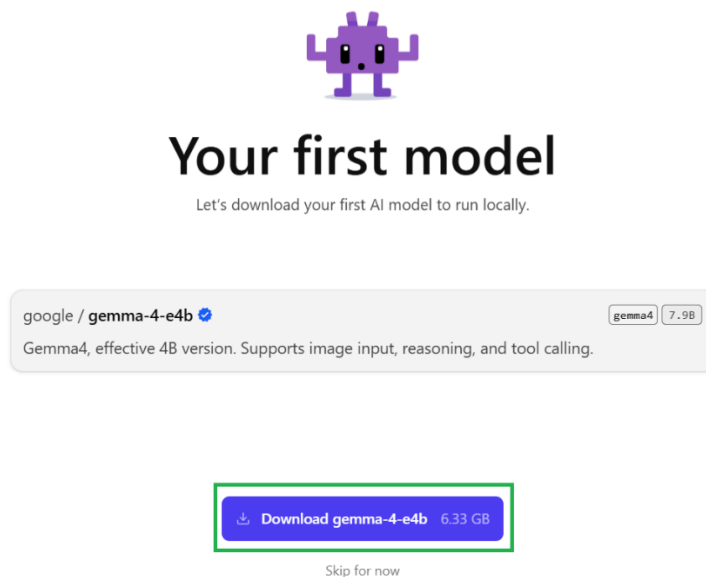

When installation is complete, you should see a successful installation dialog. Keep the **Run LM Studio** checkbox checked and click the **Finish** button to finish the installation.

7. LM Studio opens and you should see a window like the below. Click the **Get Started** button.

8. On the next screen you see the name of a model: **gemma-4-e4b**. Click the **Download gemma-4-e4b** button (the **gemma-4-e4b** is large and it will take a few minutes to download).

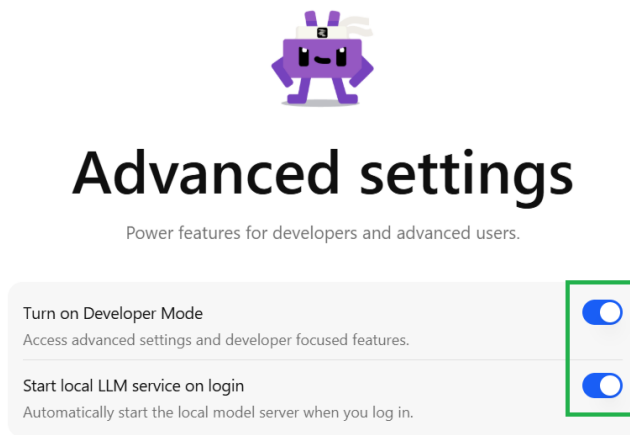

- ➔ Wait until download is complete
- When download is finished, you should see the label

Click the **Continue** button.

9. On the Advanced Settings screen, toggle the **Turn on Developer mode**, then click the **Continue to LM Studio** button.

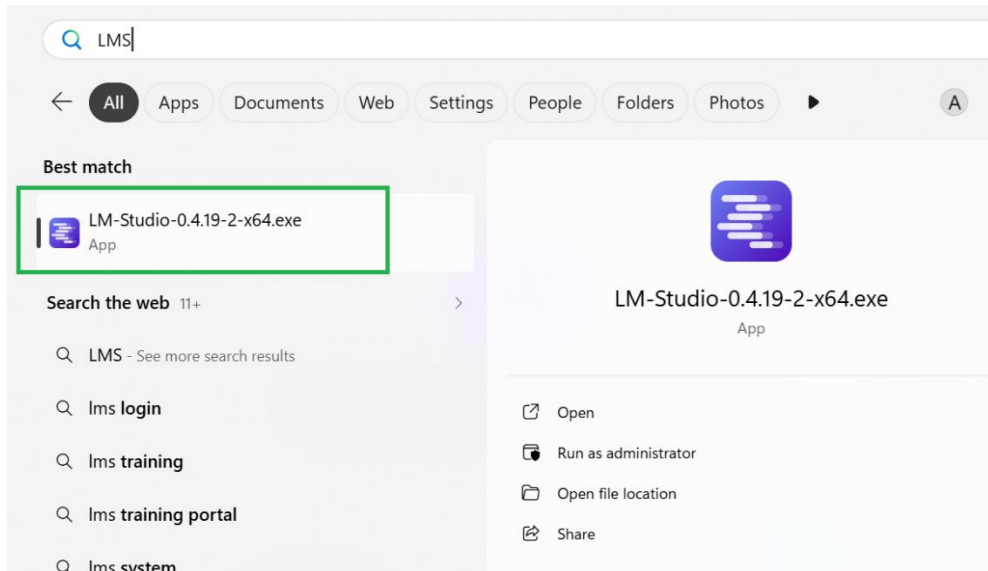

This opens the LM Studio application.

You can now close the LM Studio.

How to re-open LM Studio?

To re-open LM Studio at any time, click the **Windows** keyboard button and start typing **LM Studio**. This brings the LM Studio menu item into view.

Click the menu item to start it.
